Subject: EPA PSD Permit for M0470090

I talked with DJ Law from the EPA in Denver. (303-312-7015) The PSD permit is under 40CFR 52.21. This permit is for Prevention of Significant Deterioration of air quality. The permit is for the process and not for the mine. Earth Energy is responsible for applying for the permit if they believe they meet the criteria in the CFR. Since the data available on the quantity of solvent used in a large scale operation and the quantity lost in the process to the air and the waste material are mostly estimates, both UDOGM and Grand County should require the Permit. As the process develops, more accurate data will be available on the quantity and types of air pollutions, and the EPA will be in a position to protect the health and welfare of the citizens of Grand County.
